University of Edinburgh, UK

WORK EXPERIENCE

Research Associate in Computational Modelling

University of Edinburgh & University of Sheffield

Mar 2017 – Aug 2018

United Kingdom

Advisors: Prof. Barbara Webb & Dr Michael Mangan

Investigate the celestial properties in context of animal navigation

Design a novel anatomically-constrained celestial compass

Research Assistant in Bio-robotics

University of Edinburgh

Sep 2016 – Feb 2017

United Kingdom

Advisor: Prof. Barbara Webb

Study the learning mechanism of *Drosophila* larva

Build a robot that tries to find the gustatory source following the gradients of the associated odour

Research Assistant in Machine Learning

Centre for Research and Technology - Hellas (CERTH)

June 2014 – Aug 2015

Greece

Advisor: Dr Petros Daras

Real-time evaluation of athletes' technique from gestures captured using multiple Microsoft Kinects and WIMUs or the Vicon system

Integrate into a video game using C# and Unity3D

EDUCATION

PhD in Bio-inspired Robotics & Autonomous Systems

University of Edinburgh

Sep 2018 - present

United Kingdom

Memory dynamics in the insect brain

Supervisor: Prof. Barbara Webb

Robotics and Autonomous Systems CDT

MSc in Artificial Intelligence

University of Edinburgh

Aug 2016

United Kingdom

with Distinction

Data-driven adaptation of the evasion behaviour in fiddler crabs

Supervisor: Prof. Barbara Webb

EU/UK Masters Scholarship

BSc in Computer Science

Aristotle University of Thessaloniki

Jul 2013

Greece

First-class Honours

Deep learning algorithms for multi-label data

Supervisor: Prof. Grigorios Tsoumakas

FUNDING & AWARDS

Percy Sladen Memorial Fund Grant

The Linnean Society of London

Jun 2019

Seville, Spain

Fieldwork experiments on desert ants

Test for vector-sequence memories during path integration

Robotics and Autonomous Systems - Centre for Doctoral Training Grant

Engineering and Physical Sciences Research Council (EPSRC)

Sep 2018

Edinburgh, UK

Awarded to the top 10 applicants

UK/EU Master's Scholarship

University of Edinburgh

Sep 2015

Edinburgh, UK

Awarded to the top 100 UoE entries

ORAL PRESENTATIONS

- 🗣️ *How flies acquire, forget and assimilate memories: a computational perspective.* At the Mushroom body meeting. Jun 2021. Online
- 🗣️ *From skylight input to behavioural output: a computational model of the insect polarised light compass.* At the International Navigation Conference. Oct 2019. Edinburgh International Conference Centre, United Kingdom
- 🗣️ *Predator evasion by a Robocrab.* The living Machines. July 2017. Stanford University, CA, USA

POSTER PRESENTATIONS

- 📄 *An anatomically accurate circuit for short- and long-term motivational learning in fruit flies.* At the COSYNE Conference. March 2022. Lisbon, Portugal
- 📄 *The incentive circuit of the fruit fly brain: a computational perspective.* At the Bernstein Conference. September 2021. Online
- 📄 *Robustness of a model of the insects' celestial compass in realistic conditions.* At the International Conference on Invertebrate Vision. August 2019. Bäckaskog Slott, Sweden
- 📄 *Imitating the Drosophila larval learning behaviour on a robot.* At the Maggot Meeting. October 2018. University of Edinburgh, United Kingdom

UNIVERSITY THESES

Memory dynamics in the insect brain

Thesis — Doctor of Philosophy

📅 Sep 2018 - Aug 2022 (expected) 📍 University of Edinburgh

We come up with a computational model of the insect mushroom body, constrained by biological findings of the insect brain. This model is able to acquire, forget and assimilate (transfer from short- to long-term) associative memories, represent a spectrum of motivation for the animal and drive its behaviour. We examine the capabilities of this model as an olfactory conditioning system and as part of the insect visual navigation mechanism.

Robocrab: data-driven adaptation of the evasion behaviour in fiddler crabs

Dissertation — Master of Science

📅 Jun 2016 - Aug 2016 📍 University of Edinburgh

We create a semi-supervised structure of neural network, inspired by the physiology of neurons in fiddler crabs, and train it to adapt the evasion behaviour of fiddler crabs on potential predators, solving a complicated visuomotor problem (developed in Python using the Theano/Tensorflow-based 'keras' library)

Deep learning algorithms for multi-label data

Honours Thesis — Bachelor of Science

📅 Oct 2012 - Jul 2013 📍 Aristotle University of Thessaloniki

We extended a Java library implementing Restricted Boltzmann Machines and Deep Belief Networks and we used it to examine how they perform in a variety of multi-label data-sets.

STRENGTHS

Research
Computational Modelling
Computer Vision
Information Theory

Probabilistic Machine Learning

Reinforcement Learning

Robotics

NumPy

PyTorch

OpenCV

Keras

Theano

TensorFlow

C#

C/C++

R

Java

RESEARCH INTERESTS

- 🔗 Biologically plausible mechanisms of **learning** and **memory** that allow interpretive **behaviour** in artificial agent
- 🧠 **Computational intelligence** that allows artificial agents to **navigate** in the challenging real-world
- 👁️ Processing **perception** in order to **maximise information** and create hierarchical representations

TEACHING POSTS

Tutor & Demonstrator

University of Edinburgh

📅 Sep 2018 - present 📍 United Kingdom
